DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7 are, drawn to a cassette, classified in class 435, subclass 283.1.
 - II. Claim 8 is, drawn to a method of cell screening, classified in class 435, subclass 325.
 - III. Claims 9 and 10 are, drawn to an method of detecting toxin pathway and organ localization, classified in class 436, subclass 514.
 - IV. Claims 11-14 are, drawn to an automated method for detecting toxin pathway and organ localization utilizing digital data extrapolation, classified in class 435, subclass 7.21.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and (II, III, and IV) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the cassette of invention I can be utilized in either of the three distinct methods claimed in inventions II, III, or IV. Because these inventions are materially different processes (i.e. invention II is drawn to a method of cell screening, invention III is drawn to a method for toxin pathway and organ localization detection, while invention IV is drawn to an automated method of toxin pathway and organ localization detection) restrict is proper.

Art Unit: 1641

Inventions II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the independent method inventions of II, III, and IV utilize different reagents and have different method steps. More particularly although the methods of invention III and IV both detect toxin pathway and organ localization they methods have different modes of operation. The automated method of invention IV employs digital data analysis, which is not required in the method of invention III. Therein the methods (II, III, and IV) are patentably distinct inventions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter as shown by their different classification. Further, the search required for Groups I - IV are not totally coextensive, therefore restriction for examination purposes as indicated is proper. Please note that the classifications in the restriction are illustrative only and **do not** represent all the classes and subclasses which must be searched for each invention; nor is the search limited to issued US patents, but rather includes foreign patents and applications as well as literature searches.

4. Applicant is advised that the reply to this requirement be complete and must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1641

5. Applicant is reminded that upon cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

6. Papers related to this application may be submitted to Group 1600 by facsimile transmission. Papers should be faxed to Group 1600 via the PTO fax Center located in Crystal Mall 1. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The Group 1641 Fax number is (703) 308-4242, which is able to receive transmissions 24 hours/day, 7 days/week.
